CLEARFIL MAJESTY™ Posterior

A Superfilled Nano Hybrid Composite

A durable, reliable material that mimics indirect restorations but placed directly

- **Very high physical properties;** 92wt% filler including nano-sized alumina and glass-ceramics
- **Superior surface wear resistance;** excellent occlusal bite stability
- **Very low polymerization shrinkage;** minimal marginal micro-leakage and staining
- **Six optimized shades**
- **Ideal amalgam alternative**

Very high filler loading for superior physical properties including wear resistance and low polymerization shrinkage

CLEARFIL MAJESTY™ Posterior is a light-cure, nano-superfilled, radiopaque restorative posterior composite resin composed of nano and micro inorganic filler treated with a proprietary new surface coating technology. This breakthrough technology permits a larger quantity of nanofiller to be dispersed in the resin matrix. The resulting resin matrix is reinforced with a filler loading of 92 wt% (82 vol%, Fig. 1). CLEARFIL MAJESTY™ Posterior has an improved surface hardness close to that of human enamel, high mechanical strength (compressive strength: 504 MPa; flexural strength: 177 MPa, Fig. 2), high durability, high curing depth, low polymerization shrinkage (1.5 vol%, Fig. 3) and a low thermal coefficient. These features assure a durable and reliable posterior restoration.

Superior Physical Properties for Optimal Posterior Restorations

CLEARFIL MAJESTY™ Posterior's coefficient of thermal expansion is less than amalgam's and nearly mimics that of human teeth. CLEARFIL MAJESTY™ Posterior expands/contracts very similar to how tooth structure expands/contracts with thermal stress, resulting in a low mechanical stress at the tooth/restoration interface.
